Customer Sales Analysis Report

1. Project Overview

• This project uses Python and Pandas to explore sales data, perform data cleaning, calculate summary statistics, and generate visualizations.

2. Dataset Information

• Sales dataset rows: 100

• Sales dataset columns: 10

• Customer dataset rows: 500

• Customer dataset columns: 9

3. Data Quality

• Missing values in sales data: 0

• Duplicate rows in sales data: 0

• Missing values in customer data: 0

• Duplicate rows in customer data: 0

4. Sales Summary

• Sales value column: price

• Total: 2,580,851.00

• Average: 25,808.51

• Minimum: 1,308.00

• Maximum: 49,930.00

5. Product or Category Insights

• Highest-performing group: Laptop

• Total sales for this group: 663,636.00

6. Visualizations

• Saved charts are available in the visualizations folder.

7. Recommendations

• Review the best-performing products or categories.

• Investigate low-performing products.

• Continue monitoring sales and data quality.

• Perform customer-level analysis only when a reliable customer identifier is available.

8. Tools Used

• Python

• Pandas

• NumPy

• Matplotlib

• Google Colab
